

**AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph on page 31, lines 21-26, with the following amended paragraph:

For the activation of  $\gamma\delta$  T cells, the present invention also includes the use of "phospho[[-]]antigens". Phospho[[-]]antigens are antigens containing phosphate groups such as isoprenylpyrophosphate (IPP) and many others that have been characterized by the research groups of Michael Brenner and others (e.g., Tanaka et al., 1995, *Nature* 375:155-158). Yet another  $\gamma\delta$  T cell stimulatory agent includes carbin alkylamines, including those that are present in microbes, edible plants and Tea (Bukowski et al., 1999, *Immunity* 11:57-65).
